

June 2012 Tropical Storm Debby/Bayshore Boulevard

FLOOD HAZARD INFORMATION

The Town continues to work to keep residents and property owners informed as to flood hazards and methods of prevention. Toward that end, various informational publications regarding these issues are available at the Town Hall, 190 – 173rd Avenue or call (727) 391-4848. You may call or come into the Town Hall to request a flood zone determination and/or get a copy of any Elevation Certificate on file. The town's Elevation Certificate library is available online at townofnrb.com. Further information can be obtained through the following agencies with regard to

the topics listed:

A. FLOOD INSURANCE RATE MAP (FIRM)

1. Town of North Redington Beach, 190 – 173rd Avenue, North Redington Beach, FL 33708, (727) 391-4848.
2. Florida Municipal Services (Building Department) 17985 Gulf Boulevard, STE 201, Redington Shores, FL (727) 202-6825.
3. FEMA Regional Office, 3003 Chamblee-Tucker Road, Atlanta, GA 30341 (770) 220-5200.

B. FLOOD INSURANCE

1. Local Insurance Agencies
2. Florida Department of Finance (877) 693-5236

C. FLOODPLAIN MANAGEMENT

1. NFIP State Coordinator, 2555 Shumard Oak Boulevard, Tallahassee, FL 32399-2100 (770) 220-5200.
2. FEMA Regional Office, 3003 Chamblee-Tucker Road, Atlanta, GA 30341 (770) 220-5200.

You may also research information in various state and federal reference publications covering a variety of subjects including flood prevention, floodproofing non-residential structures, elevating structures, etc. at the Gulf Beaches Public Library (200 Municipal Drive, Madeira Beach) or the North Redington Beach Town Hall building. Copies of the Flood Insurance Rate Map for the Town of North Redington Beach, Panel 179 of 327, map number 12103C0179H are also available.

NRB Residents get 15% off
Flood Insurance Premiums!

Property owners within NRB enjoy a 15% discount on the cost of flood insurance due to efforts to control and reduce flooding and its costs. NRB is a member of the National Flood Insurance Program (NFIP). The FEMA rules and procedures the town maintains, to aid in this effort, must be enforced or the discount for everyone could be lost.

Do your part. Remember there can be NO air conditioned or habitable area below the base flood elevation in POST-FIRM homes. Also, PRE-FIRM homes cannot be improved 50% or more of their fair market value of the structure itself.

Protect Natural Floodplain Resources

- Floodplains, wetlands, and coastal barrier resources or land use regulations, such as zoning, can be used to steer development away from sensitive or natural areas.
- Beach nourishment and dune rebuilding can be used to protect inland development by maintaining the natural flood protection features.

- Don't dump grass or other items in storm drains.
- Stay away from turtle nesting areas.
- Keep our creeks and streams clean and free of debris.
- Stay off sand dunes and do not disturb grass used as dune stabilization.
- Protect Florida's mangrove species which filter oil and associated storm-water run off.

For more information on floodplain mitigation, visit:

www.FloridaDisaster.org

Florida Division of Emergency Management

A Guide to Flood Safety

Know Your Hazard!

- Inland flooding is a leading weather-related cause of death in the United States.
- Identify the flood zone for your neighborhood and business.
- Are you in a repetitive flood prone area?
- Know the difference between a flood **WATCH** and a flood **WARNING**.
- Have a Family Emergency Plan and a Disaster Supply Kit ready in case you need to evacuate.

Turn Around, Don't Drown!

**GET A
PLAN!**
FLGetAPlan.com
Florida Division of Emergency Management

Flood Watch vs. Flood Warning

WATCH:

The expectation of a flood event has increased, but its occurrence, location, and timing are still uncertain.

WARNING:

A flood event is occurring, imminent, or has a high probability of occurring.

Flood Safety Tips

- Monitor your NOAA Weather Radio for current and forecasted conditions in your area. Listen for instructions by local emergency management.
- When walking, do not attempt to cross flowing streams.
- Know your evacuation routes before flooding occurs to ensure your safety.
- Be especially cautious at night when it is harder to recognize flood dangers.
- Find a place where your family can safely meet up at after an evacuation order is issued.

Turn Around, Don't Drown!

For more information on flood safety, visit:

www.FLGetaPlan.com

Florida Division of Emergency Management

A Guide to Flood Mitigation

What is Mitigation?

Mitigation is the effort to reduce loss of life and property by lessening the impact of disasters. Take action now before the next disaster to reduce human and financial consequences later.

Build Responsibly

- If you plan on improving your home, or your home has sustained damage where repairs cost 50% or more of the building pre-damaged, you will be required to bring your structure up to current building and floodplain standards.
- Get a permit before you build and work with a licensed contractor.

ARE YOU DOING ALL YOU CAN TO PROTECT YOUR PROPERTY?

The purpose of this information is to inform you of flood hazards and how to protect yourself and your property.

FLOOD HAZARD AREA - The Town of North Redington Beach is located entirely in a Special Flood Hazard Area. The Flood Insurance Rate Map (FIRM) identifies the whole town as an AE Zone with some VE areas along the water. These areas are prone to flooding. You can contact Town Hall at 391-4848 to get the base flood elevation in your area.

The Town of North Redington Beach occupies an approximate mile-long portion of the Sand Key Barrier Island. The Town is framed by the Gulf of Mexico on the west and Boca Ciega Bay on the east. The entire Gulf of Mexico coastal public beach and estuarine waters of Boca Ciega Bay are protected land, preserved and cannot be developed. The beach, seawalls and mangrove areas create a storm protection barrier - acting as buffers against storm surge and waves. North Redington Beach has not sustained severe wind damage from the hurricanes that have passed close to our shores. Flooding has caused most of the damage sustained in the past during hurricane events. Waters stirred in the Gulf of Mexico and Boca Ciega Bay by hurricane-force winds rise over the seawalls. Additionally, high tides prevent heavy rains normally associated with hurricanes from draining into the bay and gulf. Consequently, rainwater can back up into homes from the streets. Hurricane winds of more than 110 miles per hour can bring a tidal surge of more than 10 feet. The severity of hurricanes is categorized on a scale of 1 through 5; category 1 hurricane is the least intense in severity and category 5 is the most powerful.

Pinellas County has adopted the Pinellas County Gulf Beach Coastal Code. The purpose of this Coastal Code is to regulate coastal construction and excavation with a locally administered program meeting the intent of Section 161.053, Florida Statutes, as amended, under the agreement between the PCCLB and the Florida Department of Environmental Protection pursuant to Section 161.053(4), Florida Statutes, as amended. This Coastal Code provides minimum standards for the design and construction of residential and commercial structures and other structures of a permanent or semi-permanent nature. Construction standards are intended to address design features that affect the structural stability of improvements under design storm conditions and which affect the stability of the beach, dunes, environmental features and physical features of adjacent property.

Should you be interested in obtaining flood zone, flood depth, special flood related hazards, historical flood or natural floodplain information or further information on any of the above subjects, please contact Town Hall. In addition, the Gulf Beaches Library (200 Municipal Drive, Madeira Beach) provides flood protection information and maintains copies of the NRB flood insurance rate maps (FIRM).

In addition, the State Department of Environmental Protection department has adopted a Coastal Construction Control Line Map. The **Coastal Construction Control Line (CCCL)** Program regulates structures and activities which can cause beach erosion, destabilize dunes, damage upland properties, or interfere with public access. CCCL permits also protect sea turtles and dune plants. Here you will find CCCL Program topics to help guide CCCL permit applicants, and educate the public on the coastal construction permit program. You can also give us a call (850-245-8336).

FLOOD WARNING - When a hurricane threatens land, a Hurricane Watch is issued. If severe flooding is expected from an approaching storm, a Flood Watch is issued. A Watch means that hurricane, or flooding, conditions are possible for the area within the next 36 hours. You must take action to secure your home and prepare to leave. A Hurricane Warning is issued when winds of at least 74 miles per hour are expected within the next 24 hours. You must be prepared and ready to leave when an evacuation order is issued. When the Evacuation Order is given by Pinellas County Emergency Management it will be relayed over local TV (for example NBC, ABC, CBS and The Weather Channel) and radio stations. NRB is located in Evacuation Zone A, which is the first level ordered to evacuate.

Arrangements will be made through the Emergency Management Procedures to aid people who need help evacuating. Because the Tampa Bay Region could require as long as 26 hours to evacuate, be prepared ahead of time.

Check for a Flood Hazard: Before you commit yourself to buying property, do the following:

Ask the Building Department if the property is in a floodplain; if it has ever been flooded; what the flood depth, velocity, and warning time are; if it is subject to any other hazards; and what building or zoning regulations are in effect.

Ask the real estate agent if the property is in a floodplain, if it has ever been flooded, and if it is subject to any other hazards, such as sewer backup or subsidence.

Ask the seller and the neighbors if the property is in a floodplain, how long they have lived there, if the property has ever been flooded, and if it is subject to any other hazards.

INSURE YOUR PROPERTY FOR YOUR FLOOD HAZARD- Flood Insurance is required in the Town of North Redington Beach for any federally-backed mortgage. The National Flood Insurance Program (NFIP) is administered by the Federal Emergency Management Agency (FEMA) through its Federal Insurance Administration. The Town participates in NFIP; therefore, you can purchase a separate flood insurance policy.

Increased cost of compliance coverage with a limit of \$20,000 is afforded under the flood insurance policy for the increased costs to rebuild, or otherwise alter, a flood-damaged structure to bring it into compliance with State or local floodplain management ordinances or laws.

If you don't have flood insurance or want to find out more about flood insurance for your property, talk to your insurance agent. Homeowner's insurance policies do not cover damage from floods or any rising waters. Remember, even if the last flood missed you or if you have done some floodproofing, the next flood could be worse. Flood insurance can be purchased on eligible residential and commercial buildings and/or their contents, or tenants can purchase contents-only coverage.

Don't wait for the next flood to buy insurance protection. There is a 30-day waiting period before National Flood Insurance Program coverage takes effect.

Participants in the NFIP program (including North Redington Beach) are governed by the "50% rule". The rule requires homes that have been structurally improved by 50% or more of the market value of the structure to have the lowest floor at or above the base flood elevation. Non-residential buildings can be "flood proofed" as an alternative to raising the lowest floor. Permits must be obtained and applications reviewed by the Building Official prior to any construction or development within the community. Please contact the Building Department (727) 202-6825 prior to any construction.

BEING AWARE OF STEPS TO REDUCE LOSS BEFORE A FLOOD IS THE FIRST STEP TO SAFETY

Several of the Town's efforts to reduce flood damage depend on your cooperation and assistance. Please help us with this effort.

WHAT YOU CAN DO EVERY DAY:

To ensure against flooding, it is important to maintain the water-carrying capacity of the Town's drainage system, therefore--

Hurricane Elena Damage 1985

- Do not dump or throw anything (grass clippings, etc.) into the gutters, swales or Boca Ciega Bay. These areas must be free of debris in order to function as they have been designed, and edging of the curb area is mandatory to ensure that grass doesn't stop the flow of stormwater.
- If you observe any illegal disposal of materials into drainage facilities that could obstruct the flow of stormwater or if you see dumping of debris into gutters, swales or Boca Ciega Bay, please notify the Public Works Department at 391-4848.
- Always check with the Building Dept. before you build on, alter, re-grade or add fill to your property. A permit may be needed to ensure that these projects do not cause problems for other properties.
- If you see building or filling being done without a permit posted, contact the Building Department at 202-6825.

WHAT YOU CAN DO DURING SEVERE WEATHER:

- Listen for weather updates on local TV channels and radio stations to stay informed.
- Keep a portable radio and flashlight on hand with fresh batteries.
- **Clear your yard and porches of loose objects, furniture, plants, etc.**
- **Moor your boat securely and make it as watertight as possible.**
- Place personal possessions and furniture in higher locations to reduce flood loss.
- Consider sandbagging outside doors.
- Turn off electricity and unplug small appliances from electrical outlets. Turn off the water to your home.
- Shutter or board all windows to help prevent glass from shattering and water from further damaging personal belongings.
- **Plan a flood-free evacuation route and know where to go.**
- **DO NOT walk through flowing water. DO NOT drive through a flooded area. Stay away from power lines and electrical wires. LOOK BEFORE YOU STEP!**

OVERVIEW OF FLOOD PROTECTION RETROFITTING METHODS

ELEVATION

This method consists of raising a house on an elevated support structure to place it above future flood waters. The exact method can include a number of possibilities that depend on local conditions such as expected flood and wind forces, building type and size, and soil bearing capacity. Elevation may be considered for all types of homes, including structures built slab-on-grade or over crawlways. Types of elevated foundations consist of:

Elevation on Extended Foundation Walls – The house is elevated and set on walls that have been built up from the original foundation. This method is particularly appropriate where the characteristics of flooding involve up to moderate depths with slow velocities, and is commonly used.

Elevation on Piers – This method is employed for shallow flooding with slow to moderate velocities. The house is elevated and set on low foundations that are constructed of reinforced masonry block or reinforced concrete.

Elevation on Posts or Columns – This method is used for shallow to moderate flood depths with slow to moderate velocities. The house is set on taller structures, generally made of wood, steel, or concrete, set in pre-dug holes and braced together.

Elevation on Pilings – This method is employed where high velocity water could undermine other structures such as in coastal high-hazard areas. It is also suitable for deep flood depths or poor

soil conditions. The house is set on tall foundation pilings, usually wood, that have been driven into the ground.

Elevation on Fill – This method is limited to areas of low flood depths and low velocities. The house is elevated on compacted soil.

RELOCATION

Perhaps the only technique for completely preventing future flood damage, this method involves moving a house out of a flood area to a new location where there is no threat of flooding. The technique for moving most any house in good structural condition is well developed. It is generally more expensive and time consuming than most elevation techniques, but it can be a very feasible method in many cases.

LEVEES

A possible technique in areas of shallow and moderate flooding depths with low velocity, this is a method of creating a barrier of compacted soil to keep the water away from a house. It can be one of the least expensive techniques, and it can be attractively landscaped. Its construction, however, requires great care, and there must be continued attention and maintenance to prevent its failure.

FLOODWALLS

This method is sometimes practical for areas with low to moderate flooding depths and velocities. As with levees, floodwalls are designed to keep the water away from a house, but are constructed of materials such as masonry block and reinforced concrete. They are more expensive than levees, but if properly designed, do not require as much concern with continued inspection and maintenance. However, because some designs have openings for access to the house, they often require closures and human presence to make sure they are in place prior to flooding.

CLOSURES

Often used in conjunction with other techniques such as floodwalls and levees, closures involve techniques for protecting gaps that have been left open for day-to-day convenience, such as walks, doors, and driveways.

SEALANTS

Sometimes referred to as dry floodproofing, this method can be used only in areas of very shallow flooding to completely seal a home against water. Because of the tremendous pressures that water can exert against a structure protected by this method, the techniques can only be used on brick veneer or masonry construction in good structural condition, and then only when the flood levels cannot exceed two to three feet and flood velocities are negligible.

UTILITY PROTECTION

Often very costly damage to utilities such as heating, air conditioning, electrical and plumbing systems occurs during floods. Simple and relatively low-cost measures can usually prevent damage to these systems, which are essential to the habitability of a residence.

SPECIAL TECHNIQUES

These are some special floodproofing techniques used in unusual flooding situations. They include retrofitting in alluvial fans, elevation of fill and elevation on reinforced mat slabs.

Did you know...

Your homeowner's insurance does not cover a flood?

Floods are the #1 natural disaster in the United States and can happen anytime and anywhere. Types of flooding vary and include riverine flooding, ponding in streets and low-lying areas, as well as flooding from storm surge.

FEMA's **National Flood Insurance Program (NFIP)** provides homeowners with a safeguard from financial loss caused by a flooding event.

Depending on your property location, your home is either considered at high-risk or at moderate-to-low risk for a flood. Your insurance premium will vary accordingly.

Insure your property against flooding

- Know your flood risk. Speak to an insurance professional to understand your flood insurance needs.
- Renters should buy flood insurance for their belongings.
- If your community participates in the NFIP, you are eligible to purchase flood insurance, even if you are located outside the floodplain.
- For properties located outside the special flood hazard area, you can take advantage of a low-cost **Preferred Risk Policy**.
- Understand your local alert notification systems and know what you should do, so you are prepared to evacuate or take actions to protect your property.

For more information about the NFIP and Flood insurance, visit www.FloodSmart.gov or call 1-800-427-2419

Florida Division of Emergency Management
www.FloridaDisaster.org

HURRICANE SEASON IS HERE!

Time to prepare and grab a copy of the Pinellas County Hurricane Guide!

We are now in the Atlantic hurricane season, which runs from June 1 until November 30. **Now that we are in the season, it is more important than ever to prepare for what could come.** That's why it's important to pick up your copy of the Pinellas County Hurricane Guide. You can find a copy of the guide at the following locations: Town Hall, Fire Departments, all libraries, Pinellas County Courthouses, Tax Collector offices and is available online.

While there may be several guides out there to choose from, the official guide of Pinellas County addresses the special considerations of our very vulnerable county. Find the latest information on how to get ready for this year's storms. From preparing your pet and family to preparing your car and home, you'll find preparedness information in this guide you won't find anywhere else. Pick up your copy and be prepared.

Some key preparation steps include:

- North Redington Beach is in Evacuation Level "A" (first to go). The evacuation route is North on Gulf Boulevard to the Park Boulevard Bridge.
- Assemble an emergency survival kit that provides for your family's needs for a minimum of one week. Make sure you have your Pinellas County Sheriff's Office Emergency Access Permit.
- Find out now where you will be evacuating to should an order be issued.
- Plan your house preparations; i.e. prepare shutters to protect your windows, brace your entry doors and garage door.

While the most active months of hurricane season are still to come, understand that a hurricane can spin up at any time. Check the weather forecast daily to stay on top of any tropical developments.

Plan ahead ~ Have an evacuation plan!

Pinellas County Sheriff's Office has an Emergency Access Permit program. All property owners, business owners and residents can come to Town Hall to be issued a permit. The program was developed for the initial return to your NRB property after a hurricane or natural disaster. These permits reduce traffic/re-entry time. The permits do not expire and do not need to be renewed.

The Sheriff's Department will monitor all entry points to the beach (bridges) after a disaster. The permits are available at Town Hall. However, they will not be available if a hurricane evacuation is declared. Therefore, get your permit now if you haven't already. Property owners are eligible for two permits per property (or 1 to owner and 1 to tenant, if applicable). You must apply in person with photo ID and have proof of residency.

The map displays the Town of Arlington Beach, showing various zones (A, B, C, D, E, F, G, H, I, J, K, L, M, N, O, P, Q, R, S, T, U, V, W, X, Y, Z) and their corresponding elevations. The map includes a grid of latitude and longitude coordinates, a scale bar, and a north arrow. The map is titled "Town of Arlington Beach 125140".

The image shows the FEMA National Flood Insurance Program logo on the left, which includes the FEMA text and a circular seal. To the right of the logo is a table with the following data:

COMMUNITY	NUMBER	PERCENT	TYPE
ADJUTANT GENERAL'S OFFICE	138,144	86.7%	"
ADJUTANT GENERAL'S OFFICE	173,113	70.7%	"
ADJUTANT GENERAL'S OFFICE	1,24,136	86.7%	"
ADJUTANT GENERAL'S OFFICE	1,24,136	86.7%	"
ADJUTANT GENERAL'S OFFICE	1,24,136	86.7%	"

After the Flood

If your home has suffered flood damage, here are some steps to help you stay safe. For more information, visit FloodSmart.gov. To protect your property with a flood insurance policy, call your insurance agent or call 1-800-427-2419 to find an agent near you.

BEWARE OF HAZARDS

- Check for damage. Check for structural damage before re-entering your home. Contact the appropriate professionals immediately if you suspect damage to water, gas, electric and sewer lines.
- Throw away food that has come in contact with floodwaters. Boil water until authorities declare the water supply safe to drink.

FILE YOUR FLOOD INSURANCE CLAIM

- Call the insurance agent who handles your flood insurance to file a claim. Have the following information with you when you place your call: (1) the name of your insurance company (your agent may write policies for more than one company); (2) your policy number; and (3) a telephone number/e-mail address where you can be reached.
- Take photos of any water in the house and damaged personal property. If necessary, place these items outside the home. Your adjuster will need evidence of the damage and damaged items (e.g., cut swatches from carpeting) to prepare your repair estimate.
- Make a list of damaged or lost items and include their age and value where possible. If possible, supply receipts for those lost items to the adjuster. Officials may require disposal of damaged items. If so, keep a swatch or other sample of the items for the adjuster.

CLEAN UP

- Prevent mold and remove wet contents immediately. Wet carpeting, furniture, bedding and any other items holding moisture or water inside the building can develop mold within 24 to 48 hours. If an item has been wet for less than 48 hours, help control mold growth by cleaning with a phenolic or pine-oil cleaner (non-ammonia detergent, soap or commercial cleaner) and

disinfecting with a 10 percent bleach solution (1-1/2 cups of bleach in a gallon of water). Items should then be completely dried and monitored for several days for any fungal growth and odors. If any mold develops, throw the item away.

- Thoroughly dry out the building's interior. Portable dehumidifiers are useful, and rental costs may be covered under your flood policy. An air conditioner can also be used to start the drying-out process.
- If the walls are damaged, take photographs of the baseboard. Then remove the baseboard. Knock small holes at floor level in the drywall, between the wall studs. This will permit moisture trapped behind the drywall to seep out and start drying.
- Have your furnace checked for damage. Your water heater may work, but if the floodwater covered part or the entire tank, the insulation between the walls may be damaged. Obtain an estimate to replace the damaged furnace and water heater.
- Contact your local building inspections or planning office or county clerk's office to get more information on local building requirements before repairing your structure. If you can't find a local contact, call your state NFIP coordinator. Contact information can be found at www.floods.org/statepocs/stcoor.asp.
- Do not approach wild animals that take refuge in your home. Wild animals often seek refuge from floodwaters on upper levels of homes and have been known to remain after water recedes. Call your local animal control office or wildlife resource office to handle the situation.

FOR MORE INFORMATION

- For FEMA Disaster Assistance, call 1-800-621-3362.
- For general flood insurance questions, call 1-800-427-4661 or contact your insurance company or insurance agent.

Flood Hazard: Check Before You Buy

Most everyone knows that coastal properties are subject to flooding and wind damage from hurricanes. There are maps that show areas predicted to flood. To find out more about flood-prone area maps, check with the Building Department 727-202-6825 or Town Hall.

However, flooding and other surface drainage problems can occur well away from the coast. If you're looking at a property, it's a good idea to check out the possible flood hazard before you buy. Here's why:

- The force of moving water or waves can destroy a building.
- Slow-moving floodwaters can knock people off their feet or float a car.
- Even standing water can float a building, collapse basement walls, or buckle a concrete floor.
- Water-soaked contents, such as carpeting, clothing, upholstered furniture, and mattresses, may have to be thrown away after a flood.
- Some items, such as photographs and heirlooms, may never be restored to their original condition.
- Floodwaters are not clean: floods carry mud, farm chemicals, road oil, and other noxious substances that cause health hazards.
- Flooded buildings breed mold and other problems if they are not repaired quickly and properly.
- The impact of a flood—cleaning up, making repairs, and the personal losses—can cause great stress to you, your family, and your finances.

Floodplain Regulations: The Town of North Redington Beach regulates construction and development in the floodplain to ensure that buildings will be protected from flood damage. Filling and similar projects are prohibited in certain areas. Houses substantially damaged by fire, flood, or any other cause must be elevated to or above the regulatory flood level when they are repaired. More information can be obtained from Building Department 727-202-6825.

Check for a Flood Hazard: Before you commit yourself to buying property, do the following:

- Ask the Building Department if the property is in a floodplain; if it has ever been flooded; what the flood depth, velocity, and warning time are; if it is subject to any other hazards; and what building or zoning regulations are in effect.
- Ask the real estate agent if the property is in a floodplain, if it has ever been flooded, and if it is subject to any other hazards, such as sewer backup or subsidence.

- Ask the seller and the neighbors if the property is in a floodplain, how long they have lived there, if the property has ever been flooded, and if it is subject to any other hazards.

Flood Protection: A building can be protected from most flood hazards, sometimes at a relatively low cost. New buildings and additions can be elevated above flood levels. Existing buildings can be protected from shallow floodwaters by regrading, berms, or floodwalls. There are other retrofitting techniques that can protect a building from surface or subsurface water.

Flood Insurance: Homeowners insurance usually does not include coverage for a flood. One of the best protection measures for a building with a flood problem is a flood insurance policy under the National Flood Insurance Program, which can be purchased through any licensed property insurance agent. If the building is located in a floodplain, flood insurance will be required by most federally backed mortgage lenders. Ask an insurance agent how much a flood insurance policy would cost.

PET LITTER

Please keep our parks, streets and walkways clean and free of pet litter. Everyone who walks their pet is required by a Town Law (Ordinance Section 14-32) to promptly remove pet feces from any property. Continued failure to pick up after your pet constitutes a nuisance and is a misdemeanor violation. Also, do not allow your pet(s) in the children's playground areas as this causes unsanitary conditions. All parks have dog waste bag dispensers for your convenience in case you forget one. Town Hall accepts donations of your used plastic bags. Be a responsible citizen, have your dog on a leash on all public property and clean up after your pet so that other residents can enjoy our park areas too!

NO DUMPING!

The Town is required yearly to obtain a permit from the State of Florida to further its efforts to reduce the amount of pollutants entering the public waterways and endangering the environment. To work toward that goal the Town is requesting your help in the following ways:

- **Please don't block, dump or throw anything (including concrete, grass clippings, tree debris etc.) into the gutters, swales or Boca Ciega Bay. These areas must be free of debris to function as they have been designed.**
- **It is especially important that no one disposes of, dumps or causes the disposal of any hazardous waste within the municipal limits of the town.**

Hazardous waste is defined as any solid waste, or combination of solid wastes, which because of its quality, concentration, or physical, chemical or infectious characteristics may cause or significantly contribute to an increase in mortality or an increase in serious irreversible or incapacitating reversible illness or pose a substantial present or potential hazard to human health or the environment when improperly transported, disposed of, stored, treated or otherwise managed. These materials can be disposed of in conjunction with established amnesty days of the county and the state, and at properly authorized locations or sites.

- If you observe any illegal disposition of materials into drainage facilities that could obstruct the flow of stormwater or if you see dumping of hazardous waste or debris in gutters, manholes, swales or the Boca Ciega Bay, please notify the Public Works Department at 391-4848.
- Also, if you are contemplating construction, please check with the building department before you build onto, alter, re-grade or fill your property. A permit may be needed to ensure projects do not cause drainage problems on other properties, increase chemical pollutants (pesticides, fertilizers, etc.) entering the waterways, not cover more than 70% (in all zoning districts other than RM-15 and RS-150) of your lot area with impervious material.
- Find plants and gardening methods that require fewer fertilizers, herbicides and pesticides for your landscaping plan in order to reduce the possibility of chemicals polluting the bay.
- If you see building or lot-filling without a building permit posted call Town Hall at 391-4848.

If you have a stormwater drainage facility on your property, you are required to have that facility inspected by the Town.
